

Liquid fuels demand and supply model

Week 1 analytical pack

South Africa | Petrol and diesel

6 October 2026

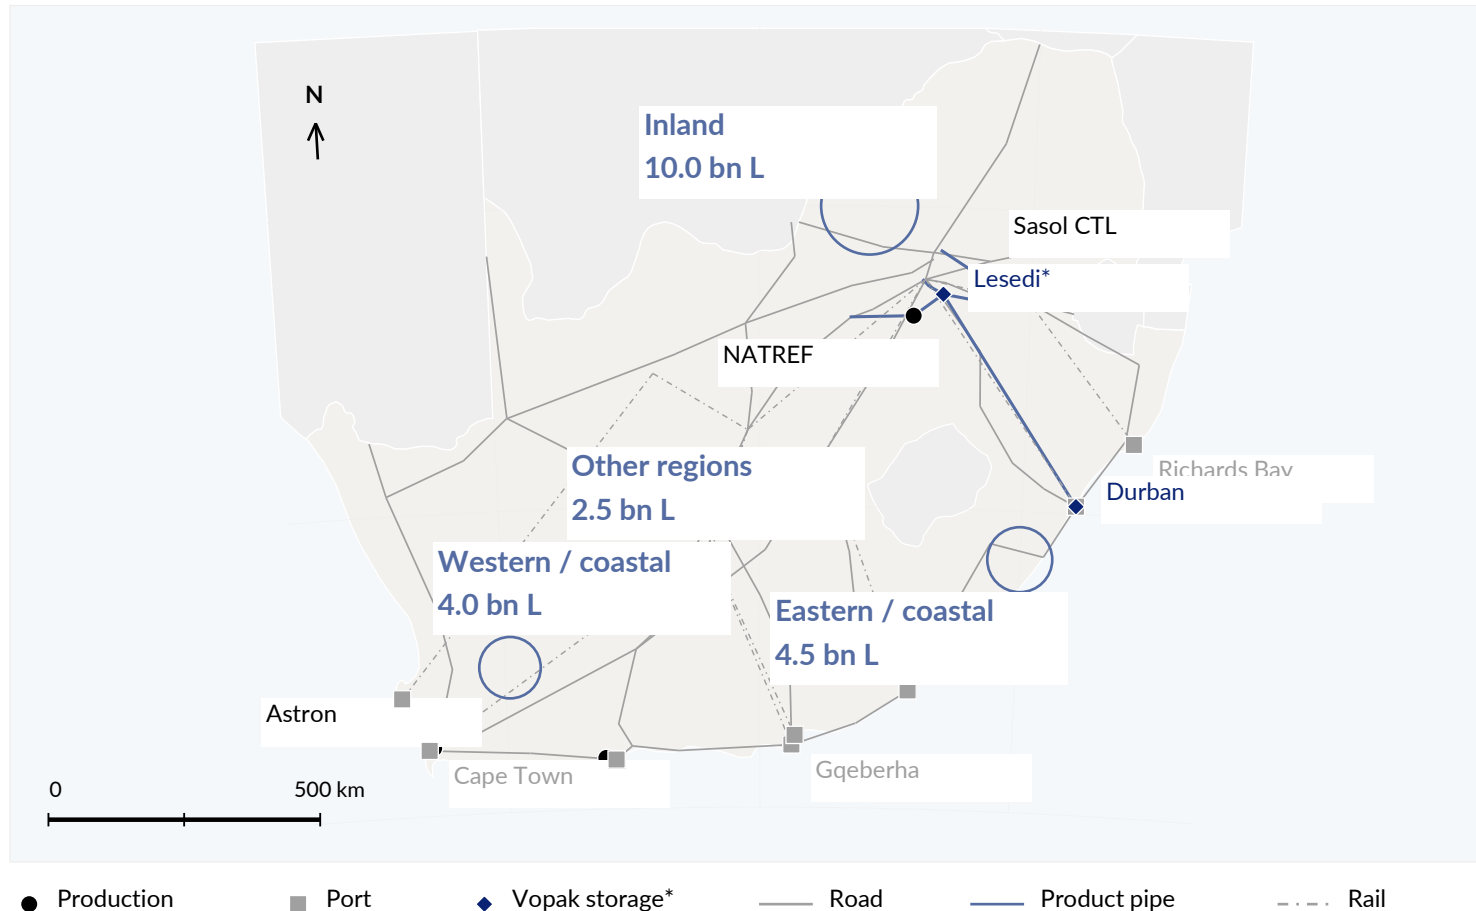

Internal working discussion

Photo source: Royal Vopak | Terminal Durban | vopak.com

Locate fuel demand alongside the infrastructure serving it

Consolidated infrastructure + regional demand | illustrative, billion litres/year

*Approximate sites. LAEA / WGS84. Transport is schematic; capacities/access unverified.

Source: Natural Earth 1:50m; kickoff appendix / schematic networks; illustrative regional CSV. 6 Oct 2026.

Demand to assess

Region	Petrol	Diesel
Eastern / coastal	1.8	2.7
Inland	4.2	5.8
Western / coastal	2.0	2.0
Other	1.0	1.5
National	9.0	12.0

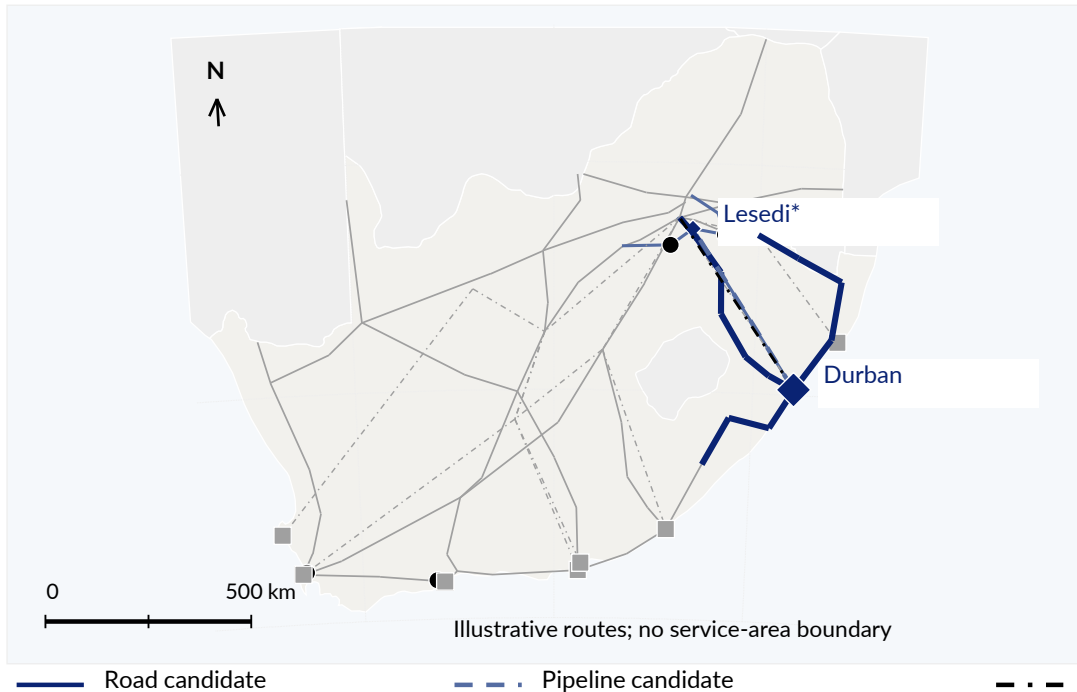

Seven infrastructure layers

Production, pipelines, ports, roads, rail, storage and corridors.

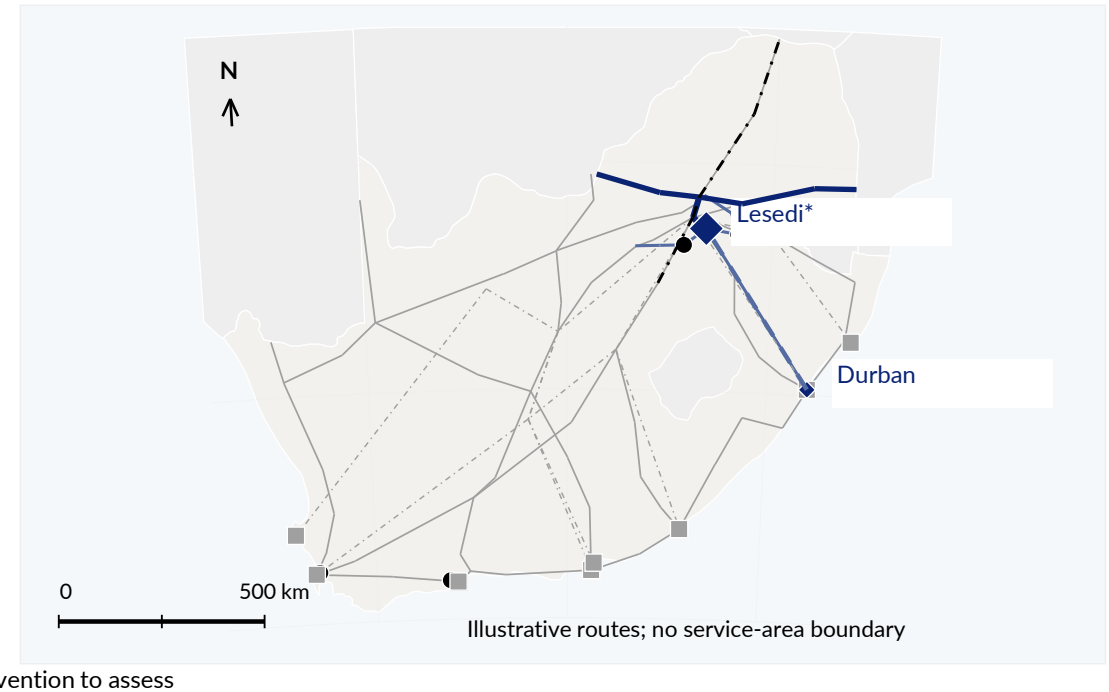

Marker area shows illustrative demand, not a catchment. Other operator storage sites remain to locate.

Map conditional market access from Durban and Lesedi

Durban | coastal deliveries + inland transfers

Lesedi | inland dispatch + connected markets

Condition

Accessibility test

Existing road / pipe candidate

Capacity, compatible product, dispatch, access rights and delivered cost

Expanded-route candidate

A specified rail/road/pipeline intervention, timing, interfaces and customer access

Observed customer catchments: not supplied. Physical reach is conditional; contracts and competitors determine commercial access.

Source: Existing appendix routes; illustrative candidate connections, not verified catchments. Natural Earth 1:50m.

Separate demand, accessible volume and Vopak flows

ILLUSTRATIVE ONLY | billion litres/year | petrol + diesel; jet excluded

National demand 21.0 – domestic production 7.0 = required imports 14.0

Exports and stock movements are zero in this illustration only.

Market	Demand	Feasible flows	Commercial envelope	Current unique demand served	Additional candidate	
Eastern coastal	4.5	3.8	2.5	1.0	1.5	
Inland	10.0	8.2	6.0	2.0	4.0	
Combined	14.5	12.0	8.5	3.0	5.5	

Count customer demand once

Durban receipts 2.8 + Lesedi receipts 2.0 – shared transfer 1.8 = unique demand served 3.0

Additional candidate volume is conditional, not forecast capture. The envelope includes domestic and imported supply. Western/other access remains unassessed.

Agree priorities and next steps

Confirm demand, routes and access
